

Lab 2: Working With Video & Midi

(Please note: You will require your own **.mov** file to work with in this lab, please use any footage that you feel will be appropriate, preferably something you have filmed yourself).

Reference:

To import a movie to the Logic 8 software click *Options> Movie> Open Movie*

To import the audio from a movie click *Options> Movie> Import Audio from Movie (or Import Audio To Arrange)*

To create a 'software instrument track' click the '+' button above the track list, select '*software instrument*' from the '*type*' list then click '*create*'. (You can then use the '*Library*' within the '*media area*' to select a pre made instrument).

Task 1

Develop a midi soundtrack to synch with your movie. Use as many tracks and instruments as you like.

Task 2

Once you have your full arrangement bounce the completed sound track from Logic to an appropriate file format. (You may also export the song to the movie directly if you wish).
