

MAFELAP 2009 PROGRAMME – Detailed version

Tue 9 – Fri 12 June 2009

1	Tue 0945: H001: Invited talks	1
2	Tue 1400A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods	1
3	Tue 1400B: LC062: Goal-oriented error estimation and adaptivity	2
4	Tue 1400C: LC063: Contact problems	2
5	Tue 1400D: LC064: Finite element methods in tissue and bone mechanics	3
6	Tue 1400E: LC065: Boundary element methods for high frequency problems	3
7	Tue 1400F: LC066: Advanced Discretization Methods	4
8	Tue 1400G: LC067: Mathematical aspects of finite element methods	4
9	Tue 1610A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods	4
10	Tue 1610B: LC062: Goal-oriented error estimation and adaptivity	5
11	Tue 1610C: LC063: Contact problems	5
12	Tue 1610D: LC064: Cardiovascular Biomechanics	5
13	Tue 1610E: LC065: Boundary element methods for high frequency problems	6
14	Tue 1610F: LC066: Advanced Discretization Methods	6
15	Tue 1610G: LC067: Mathematical aspects of finite element methods	6
16	Tue 1730: H001: ZIENKIEWICZ LECTURE	7
17	Wed 0835A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods	7
18	Wed 0835B: LC062: Validation and robust prediction in computational science	7
19	Wed 0835C: LC063: Contact problems	8
20	Wed 0835D: LC064: Finite Element Approximations in Optimal Control	8

21 Wed 0835E: LC065: Boundary element methods for high frequency problems	9
22 Wed 0835F: LC066: Recent Developments in Locally Conservative Methods for Flow in Porous Media	9
23 Wed 0835G: LC067: Finite element methods for convection dominated problems	10
24 Wed 1110: H001: Invited talks	10
25 Wed 1400A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods	10
26 Wed 1400B: LC062: Validation and robust prediction in computational science	11
27 Wed 1400C: LC063: Contact problems	11
28 Wed 1400D: LC064: Finite Element Approximations in Optimal Control	11
29 Wed 1400E: LC065: Boundary element methods for high frequency problems/ Boundary Elements: theory and applications	12
30 Wed 1400F: LC066: Recent Developments in Locally Conservative Methods for Flow in Porous Media	12
31 Wed 1400G: LC067: Finite element methods for convection dominated problems	13
32 Wed 1610A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods	13
33 Wed 1610B: LC062: Goal-oriented error estimation and adaptivity	14
34 Wed 1610C: LC063: Parallel session talks	14
35 Wed 1610D: LC064: Finite Element Approximations in Optimal Control	14
36 Wed 1610E: LC065: Boundary Elements: theory and applications	15
37 Wed 1610F: LC066: Domain decomposition methods and hierarchical bases of finite elements	15
38 Wed 1610G: LC067: Finite element methods for convection dominated problems	15
39 Wed 1730: H001: BABUŠKA LECTURE	16

40 Thu 0835A: LC061: A posteriori error estimates for discontinuous Galerkin methods	16
41 Thu 0835B: LC062: Goal-oriented error estimation and adaptivity	17
42 Thu 0835C: LC063: Finite elements and geometry	17
43 Thu 0835D: LC064: Boundary Elements: theory and applications	18
44 Thu 0835E: LC065: Higher-order and hp finite element methods	18
45 Thu 0835F: LC066: FEM for highly indefinite and eigenvalue problems	19
46 Thu 0835G: LC067: Finite element methods for convection dominated problems	19
47 Thu 1110: H001: Invited talks	20
48 Thu 1400A: LC061: A posteriori error estimates for discontinuous Galerkin methods	20
49 Thu 1400B: LC062: Goal-oriented error estimation and adaptivity/ Parallel session talks	20
50 Thu 1400C: LC063: Numerical analysis of unilateral contact between structures	21
51 Thu 1400D: LC064: Higher-Order and Zigzag Bending Theories with Applications in Computational Mechanics	21
52 Thu 1400E: LC065: Higher-order and hp finite element methods	22
53 Thu 1400F: LC066: Boundary Elements: theory and applications	22
54 Thu 1400G: LC067: Finite elements and geometry	22
55 Thu 1400H: H001: FEM with non-polynomial basis functions	23
56 Thu 1610A: LC061: Parallel session talks	23
57 Thu 1610B: LC062: Stochastic and multiscale numerical modeling of PDEs/ Parallel session talks	24
58 Thu 1610C: LC063: New trends in micromagnetics	24
59 Thu 1610D: LC064: Parallel session talks	25
60 Thu 1610E: LC065: FEM for highly indefinite and eigenvalue problems/ Higher-order and hp finite element methods	25
61 Thu 1610F: LC066: Boundary Elements: theory and applications/ Domain Decomposition and BEM	26

62 Thu 1610G: LC067: Finite elements and geometry/ Parallel session talks	26
63 Fri 0835A: LC061: Recent Advances in Discontinuous Galerkin Methods	27
64 Fri 0835B: LC062: Numerical problems in density functional theory	27
65 Fri 0900C: LC063: New trends in micromagnetics	28
66 Fri 0835D: LC064: Error control and adaption in evolution problems	28
67 Fri 0835E: LC065: Higher-order and hp finite element methods	29
68 Fri 0835F: LC066: Theory and Numerics of Boundary-Domain Integral Equations/ Finite element approximation of singularities	29
69 Fri 0835G: LC067: FEM with non-polynomial basis functions	30
70 Fri 1110: H001: Invited talks	30
71 Fri 1400A: LC061: Recent Advances in Discontinuous Galerkin Methods	30
72 Fri 1400D: LC064: Error control and adaption in evolution problems	31
Times and rooms of speakers	32

1 Tue 0945: H001: Invited talks

Chair: John Whiteman

Tue 0945: Viscous Flow Simulation Using Unstructured Meshes

K. Morgan and O. Hassan

Chair: Mark Ainsworth

Tue 1100: Kinetic Models of Dilute Polymers: Analysis, Approximation and Computation

John W. Barrett, David J. Knezevic and Endre Süli

Tue 1145: Mixed Finite Element Methods for Predictive Phase-Field Models of Tumor Growth

J. Tinsley Oden, Andrea Hawkins and Serge Prudhomme

2 Tue 1400A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods

Organisers: Yekaterina Epshteyn, Beatrice Riviere, Johnny Guzman

Tue 1400A: Coupled HDG-BEM

Bernardo Cockburn and Francisco-Javier Sayas

Tue 1425A: Bubble stabilized discontinuous Galerkin method using a symmetric formulation for second order elliptic problems: stability without penalty for the symmetric formulation

Erik Burman and Benjamin Stamm

Tue 1450A: Application of Adaptive Discontinuous Galerkin Methods to Bifurcation Phenomena in Pipe Flows

Paul Houston

Tue 1515A: A multinumerics method for solving a multiphysics problem

Beatrice Riviere

3 Tue 1400B: LC062: Goal-oriented error estimation and adaptivity

Organisers: Serge Prudhomme, Sergey Korotov, Paul Bauman

Tue 1400B: Parallel Goal-Oriented Adaptivity for a Fourier Finite Element Method.
Applications to the Oil-Industry

D. Pardo, M. J. Nam, C. Torres-Verdín and J. Kurtz

Tue 1425B: Goal-oriented error estimation through strict and effective bounds for fracture mechanics problems solved with the XFEM

Ludovic Chamoin, Julien Panetier and Pierre Ladevèze

Tue 1450B: Goal-oriented mesh adaptivity for 3-D SP_N equations

Bruno Turcksin and Jean C. Ragusa

Tue 1515B: Mesh adaptation driven by a posteriori error estimators in an anisotropic framework

Simona Perotto

4 Tue 1400C: LC063: Contact problems

Organisers: Zdenek Dostál, Matthias Maischak

Tue 1400C: Approximation of higher order for unilateral problems and effective quadrature

Joachim Gwinner

Tue 1425C: Adaptive hp -finite element methods for the contact problem with Tresca friction in linear elasticity

Philipp Dörsek and Jens Markus Melenk

Tue 1450C: Mixed fem-bem coupling for non-linear transmission problems with Signorini contact

Matthias Maischak

Tue 1515C: Numerical modeling of electrical contacts

Christian Weißefels and Peter Wriggers

5 Tue 1400D: LC064: Finite element methods in tissue and bone mechanics

Organiser: Fred Vermolen

Tue 1400D: Efficient Simulation Techniques for Complex Models in Biomechanics

Christian Groß, Rolf Krause, Thomas Dickopf and Johannes Steiner

Tue 1425D: Mathematical Model of Migration of the Enterocyte Cell Layer

David Swigon, Julia Arciero, Qi Mi, Beatrice Riviere, Kristen Pueschel and David Hackam

Tue 1450D: A finite element method for mechanical and morphological analysis of wound contraction

E. Javierre, P. Moreo, M. Doblar and J.M. García-Aznar

Tue 1515D: A suite of mathematical models incorporating several processes within wound healing

F.J. Vermolen and E. Javierre

6 Tue 1400E: LC065: Boundary element methods for high frequency problems

Organisers: Simon Chandler-Wilde, Ivan Graham, Stephen Langdon

Tue 1400E: mapping properties of Helmholtz integral operators and their application to the *hp*-BEM

Jens Markus Melenk and M. Löhndorf

Tue 1425E: Fully discrete *hp* BEM for high frequency scattering

Stephen Langdon and Jens Markus Melenk

Tue 1450E: Recent progress on hybrid numerical-asymptotic methods for high-frequency scattering problems

Víctor Domínguez, Ivan G. Graham, Tatiana Kim and Valery P. Smyshlyaev

Tue 1515E: Local solutions to highly oscillatory integral equations

Daan Huybrechs

7 Tue 1400F: LC066: Advanced Discretization Methods

Organisers: Mikhail Shashkov, Guglielmo Scovazzi, Konstantin Lipnikov

Tue 1400F: Local flux mimetic finite difference method

Konstantin Lipnikov, M. Shashkov and Ivan Yotov

Tue 1425F: A second-order flux approximation for the mimetic finite difference method

L. Beirão da Veiga, Konstantin Lipnikov and G. Manzini

Tue 1450F: Quasi-Positive Families of Continuous Darcy-Flux Finite Volume Schemes on Structured and Unstructured Grids

Michael G. Edwards and Hongwen Zheng

Tue 1515F: A unified approach to mimetic finite difference, hybrid finite volume and mixed finite volume methods

Jérôme Droniou, Robert Eymard, Thierry Gallouët and Raphaèle Herbin

8 Tue 1400G: LC067: Mathematical aspects of finite element methods

Organisers: Alan Demlow, Dmitry Leykekhman

Tue 1400G: Local finite element error estimates for optimal control problems

Th. Apel, Arnd Rösch, J. Pfefferer and Dieter Sirch

Tue 1425G: Multilevel algorithms for saddle point problems

Constantin Bacuta and Peter Monk

Tue 1450G: Error Control in Elliptic Problems with Pollution

Varis Carey and Alfred H. Schatz

Tue 1515G: Pointwise gradient estimates on highly graded meshes

Alan Demlow

9 Tue 1610A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods

Organisers: Yekaterina Epshteyn, Beatrice Riviere, Johnny Guzman

Tue 1610A: An a posteriori error estimate for an augmented discontinuous Galerkin formulation for Stokes problem

Tomás P. Barrios and Rommel Bustinza

Tue 1635A: Numerical Methods for Chemotaxis Models

Yekaterina Epshteyn

Tue 1700A: Exponential Convergence of hp -DGSEM for Linear Second-Order Elliptic Problems in 3-d Polyhedra

Thomas P. Wihler

10 Tue 1610B: LC062: Goal-oriented error estimation and adaptivity

Organisers: Serge Prudhomme, Sergey Korotov, Paul Bauman

Tue 1610B: Discretization error and modelling error in the context of the inflation of hyperelastic membranes

Simon Shaw, Michael Warby and John Whiteman

Tue 1635B: Goal-Oriented Error Estimation and Adaptive Modeling of Coupled Particle and Continuum Models

Paul T. Bauman, Serge Prudhomme and J. Tinsley Oden

Tue 1700B: Modeling error estimation and adaptivity in electrocardiology applications

L. Gerardo Giorda, L. Mirabella, F. Nobile, M. Perego and A. Veneziani

11 Tue 1610C: LC063: Contact problems

Organisers: Zdenek Dostál, Matthias Maischak

Tue 1610C: From Large Deformations to Dynamic Problems: Stable Discretization Approaches for Contact Problems in Elasticity

Rolf Krause, Christian Groß, Christina Mohr and Mirjam Walloth

Tue 1635C: Nonconforming hp -FE/BE coupling for interface problems based on Nitsche's method

Alexey Chernov and Peter Hansbo

Tue 1700C: First-Order System Least Squares for the Signorini Contact Problem in Linear Elasticity

Frank S. Attia, Zhiqiang Cai and Gerhard Starke

12 Tue 1610D: LC064: Cardiovascular Biomechanics

Organisers: Leonid Kossovich, Irina Kirillova

Tue 1610D: Modelling of human carotid artery bifurcation in healthy, affected or post-corRECTive surgery condition

L.Yu. Kossovich, I.V. Kirillova and K.M. Morozov

Tue 1635D: Blood flow and mechanical behaviour of physiologically real carotid artery bifurcation with pathological kinking

I.V. Kirillova and K.M. Morozov

Tue 1700D: Computational methodology for fluid-structure interaction problems in biomechanics of aneurysms

Padmanabhan Seshaiyer

13 Tue 1610E: LC065: Boundary element methods for high frequency problems

Organisers: Simon Chandler-Wilde, Ivan Graham, Stephen Langdon

Tue 1610E: Adaptive PU-BEM for Helmholtz problems

J. Trevelyan and G. Coates

Tue 1635E: Fast, High-Order, Well-Conditioned Algorithms for the Solution of Three-Dimensional Acoustic and Electromagnetic Scattering Problems

Catalin Turc, Oscar Bruno and Tim Elling

Tue 1700E: A fully discrete Galerkin method for high frequency acoustic scattering in three dimensions

M. Ganesh and S. C. Hawkins

14 Tue 1610F: LC066: Advanced Discretization Methods

Organisers: Mikhail Shashkov, Guglielmo Scovazzi, Konstantin Lipnikov

Tue 1610F: Advances in stabilized Lagrangian shock hydrodynamics on brick- and simplex-type finite elements

Guglielmo Scovazzi

Tue 1635F: Coupling of Stokes and Darcy flows using discontinuous Galerkin and mimetic finite difference methods

Konstantin Lipnikov, Danail Vassilev and Ivan Yotov

Tue 1700F: A Mimetic Finite Difference method for the Stokes problem

L. Beirão da Veiga, V. Gyrya, Konstantin Lipnikov and G. Manzini

15 Tue 1610G: LC067: Mathematical aspects of finite element methods

Organisers: Alan Demlow, Dmitry Leykekhman

Tue 1610G: Local energy estimates for the finite element method on sharply varying grids

Alan Demlow, Johnny Guzmán and Alfred Schatz

Tue 1635G: Hölder estimates for Green's functions on convex polyhedral domains and their applications to finite element methods

Johnny Guzmán, Dmitriy Leykekhman, Jürgen Rossmann and Alfred Schatz

Tue 1700G: An FEM for the asymmetric Laplace operator on polygonal domains

Hengguang Li

16 Tue 1730: H001: ZIENKIEWICZ LECTURE

Chair: John Whiteman

Tue 1730: Multiscale Computations: From Theory To Practice

Jacob Fish

17 Wed 0835A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods

Organisers: Yekaterina Epshteyn, Beatrice Riviere, Johnny Guzman

Wed 0835A: Discontinuous Galerkin approximation of eigenvalue problems

Ilaria Perugia

Wed 0900A: A new discontinuous Galerkin method for Hamilton-Jacobi equations

Jue Yan

Wed 0925A: Discontinuous Galerkin methods for radiative transfer in diffusive regimes

Guido Kanschat

Wed 0950A: A mixed DG method for linearized incompressible magnetohydrodynamics

Dominik Schötzau, Xiaoxi Wei and Paul Houston

Wed 1015A: Local Derivative Post-processing for the discontinuous Galerkin method

Jennifer K. Ryan

18 Wed 0835B: LC062: Validation and robust prediction in computational science

Organisers: Fabio Nobile, Raul Tempone, Serge Prudhomme

Wed 0835B: A general framework for the validation of a computational model

Ivo Babuška, F. Nobile and R. Tempone

Wed 0900B: Computationally Intensive Calibration and Validation of a Thermochemical Model with Shock Tube Radiation Measurements

Ernesto E. Prudencio, Jeremy Jagodzinski, Andre Maurente, Kenji Miki, Marco Panesi and Serge Prudhomme

Wed 0925B: Adaptive finite elements for optimal experimental design

T. Carraro

Wed 0950B: Uncertainty Quantification through Concentration of Measure Inequalities

Houman Owhadi, Ali Lashgari, Lenny Lucas, Michael Ortiz and Ufuk Topcu

Wed 1015B: Validating uncertain predictions

Anthony O'Hagan, Leonardo S. Bastos and Jeremy E. Oakley

19 Wed 0835C: LC063: Contact problems

Organisers: Zdenek Dostál, Matthias Maischak

Wed 0835C: A theoretically supported scalable TFETI based algorithm for contact problems

Zdeněk Dostál, Tomáš Brzobohatý, Tomáš Kozubek, Alex Markopoulos and Vít Vondrák

Wed 0900C: Scalable TBETI based solver for 3D contact problems

Marie Sadowská, Zdeněk Dostál and Tomáš Kozubek

Wed 0925C: Scalable TFETI for contact problems – dynamic and real world problems

Tomáš Brzobohatý, Tomáš Kozubek, Alex Markopoulos, Vít Vondrák and Zdeněk Dostál

Wed 0950C: Scalable TFETI for contact problems – parallel implementation and real world problems

Tomáš Kozubek, Tomáš Brzobohatý, Alex Markopoulos and Vít Vondrák

Wed 1015C: Scalable TFETI for 3D contact with Coulomb friction

Radek Kučera and Zdeněk Dostál

20 Wed 0835D: LC064: Finite Element Approximations in Optimal Control

Organisers: Thomas Apel, Arnd Rösch

Wed 0835D: A priori finite element error analysis for state-constrained boundary control problems

Klaus Krumbiegel, Christian Meyer and Arnd Rösch

Wed 0900D: Is boundary control suitable for singularly perturbed elliptic problems ?

G. Lube and B. Tews

Wed 0925D: On error estimates for the finite element discretization of elliptic semiinfinite optimization problems

Pedro Merina, Ira Neitzel and Fredi Tröltzscher

Wed 0950D: Convergence and regularization results for optimal control problems with sparsity functional

Daniel Wachsmuth

Wed 1015D: Optimal Control of the Two-Phase Stefan Problem: Numerical Approximation Techniques

Martin K. Bernauer and Roland Griesse

21 Wed 0835E: LC065: Boundary element methods for high frequency problems

Organisers: Simon Chandler-Wilde, Ivan Graham, Stephen Langdon

Wed 0835E: An iterative approach for the solution of multiple-scattering problems at high-frequencies using finite elements

Christophe Geuzaine

Wed 0900E: Lower bounds on the inverse of the combined potential operator at high frequency for a class of non-convex domains

Simon N. Chandler-Wilde, Ivan G. Graham, Stephen Langdon and Marko Lindner

Wed 0925E: Applications of fundamental solution methods in wave computations

Timo Betcke

Wed 0950E: High Frequency Scattering by Convex Polygons with Impedance Boundary Conditions

M. Mokgolele, Stephen Langdon and Simon N. Chandler-Wilde

Wed 1015E: A Spectral Collocation Method for the Laplace and Modified Helmholtz Equations in a Convex Polygon

Euan A. Spence

22 Wed 0835F: LC066: Recent Developments in Locally Conservative Methods for Flow in Porous Media

Organisers: Michael Edwards, Mary Wheeler

Wed 0835F: Computational Environment for Modeling Sequestration of Carbon in Saline Aquifers

Mary F. Wheeler, Sunil Thomas and Mojdeh Delshad

Wed 0900F: Multi-Dimensional Upwind Schemes for Flow in Porous Media on Structured and Unstructured Grids

Sadok Lamine and Michael G. Edwards

Wed 0925F: Fully conservative streamline methods for one and two-phase flows

T. Arbogast, Chieh-Sen (Jason) Huang, Thomas F. Russell and Wenhao Wang

Wed 0950F: Subdomain time stepping and space time domain decomposition

Caroline Japhet, Jérôme Jaffré, Michel Kern and Jean E. Roberts

Wed 1015F: Non-Linear Flux-Splitting Schemes with Imposed Discrete Maximum Principle for Elliptic Equations with Highly Anisotropic Coefficients

Mayur Pal and Michael G. Edwards

23 Wed 0835G: LC067: Finite element methods for convection dominated problems

Organisers: Volker John, Dmitri Kuzmin, Gert Lube

Wed 0835G: Analysis of higher-order streamline diffusion methods on arbitrary grids

Fatih Celiker and Johnny Guzmán

Wed 0900G: A new variant of the local projection method for convection–diffusion–reaction equations

Petr Knobloch

Wed 0925G: Adaptive postprocessing for local projection stabilization methods

Friedhelm Schieweck

Wed 0950G: Finite element methods with symmetric stabilization for the transient convection–diffusion–reaction equation

Erik Burman and Miguel A. Fernández

Wed 1015G: Explicit Runge–Kutta schemes and finite element methods with symmetric stabilization for first-order PDE systems

Erik Burman, Alexandre Ern and Miguel A. Fernández

24 Wed 1110: H001: Invited talks

Chair: George Hsiao

Wed 1110: Parametric Approximation of Geometric Evolution Equations

John W. Barrett, Harald Garcke and Robert Nürnberg

Wed 1155: Hybrid asymptotic-numerical boundary element methods for high frequency wave scattering

Simon N. Chandler-Wilde

25 Wed 1400A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods

Organisers: Yekaterina Epshteyn, Beatrice Riviere, Johnny Guzman

Wed 1400A: An HDG method for the biharmonic problem

Bernardo Cockburn, Bo Dong and Johnny Guzmán

Wed 1425A: Discontinuous Galerkin methods and local time-stepping for transient electromagnetic waves

Marcus J. Grote and Teodora Mitkova

Wed 1450A: Residual-Based *A Posteriori* Error Estimation for DG Methods

Slimane Adjerid

Wed 1515A: Locking-free optimal hybridized discontinuous Galerkin methods for Timoshenko beams

Fatih Celiker, Bernardo Cockburn and Ke Shi

26 Wed 1400B: LC062: Validation and robust prediction in computational science

Organisers: Fabio Nobile, Raul Tempone, Serge Prudhomme

Wed 1400B: Robust model updating for insufficient data

B. Goller, H.J. Pradlwarter and G.I. Schuéller

Wed 1425B: Model uncertainty modeling for the Reynolds-averaged Navier-Stokes equations

Todd A. Oliver

Wed 1450B: Monte-Carlo simulations and benchmarking for the stochastic Allen-Cahn problem

Markos Katoulakis, Georgios Kossioris, Omar Lakkis and Marco Romito

27 Wed 1400C: LC063: Contact problems

Organisers: Zdenek Dostál, Matthias Maischak

Wed 1400C: Contact shape optimization with parallel TFETI based solution of state problems

Vít Vondrák, Tomáš Kozubek and Zdeněk Dostál

Wed 1425C: Shape optimization in 3D contact problems with Coulomb friction

P. Beremlijski, J. Haslinger, M. Kočvara, Radek Kučera and J.V. Outrata

Wed 1450C: Dynamic contact problems for viscoelastic membranes: discretization

Igor Bock

Wed 1515C: Solution to nonlinear problems by TFETI domain decomposition method
Jiří Dobiáš, Svatopluk Pták, Zdeněk Dostál, Vít Vondrák and Tomáš Kozubek

28 Wed 1400D: LC064: Finite Element Approximations in Optimal Control

Organisers: Thomas Apel, Arnd Rösch

Wed 1400D: Convergence analysis of a simple adaptive finite element method for optimal control problem

Roland Becker and Shipeng Mao

Wed 1425D: A new estimation technique for state constrained optimal control problems
Arnd Rösch and Daniel Wachsmuth

Wed 1450D: A Priori Error Estimates for Finite Element Discretizations of Parabolic Optimization Problems with Pointwise State Constraints in Time

Dominik Meidner, Rolf Rannacher and Boris Vexler

Wed 1515D: Direct solution of non-smooth optimality systems for PDE control by FE software – space-time elements and smoothed projection formulas

Ira Neitzel, Uwe Prüfert and Thomas Slawig

29 Wed 1400E: LC065: Boundary element methods for high frequency problems/ Boundary Elements: theory and applications

Organisers: Simon Chandler-Wilde, Ivan Graham, Stephen Langdon/ Norbert Heuer, Antoine Sellier

Wed 1400E: Runge-Kutta methods for integral equations of time-dependent acoustic scattering

Lehel Banjai

Wed 1425E: Adaptive plane wave basis in Galerkin BEM for irregularly meshed scattering structures

E. Perrey-Debain and H. Bériot

Wed 1450E: Boundary integral equation method for an initial-boundary value problem in viscous compressible flow

George C. Hsiao

Wed 1515E: New results on non-symmetric BEM-FEM coupling schemes

Francisco-Javier Sayas

30 Wed 1400F: LC066: Recent Developments in Locally Conservative Methods for Flow in Porous Media

Organisers: Michael Edwards, Mary Wheeler

Wed 1400F: Convergence analysis of L type Finite Volume Schemes for diffusion problem on general meshes with discontinuous coefficients

L. Ag ilas, Daniele A. Di Pietro, Jérôme Droniou and R. Masson

Wed 1425F: A Posteriori Error Estimation for High Order Mixed Finite Elements

Mark Ainsworth

Wed 1450F: A Multilevel Multiscale Mimetic (M^3) Method for Two-Phase Flows in Porous Media

Konstantin Lipnikov, D. Moulton and D. Svyatskiy

Wed 1515F: Nodal symmetric locally mass conservative finite element methods for Darcy flow

Alejandro Allendes, Gabriel R. Barrenechea, Leopoldo P. Franca, Erwin Hernández and Frédéric Valentin

31 Wed 1400G: LC067: Finite element methods for convection dominated problems

Organisers: Volker John, Dmitri Kuzmin, Gert Lube

Wed 1400G: Limiting techniques for continuous and discontinuous Galerkin approximations to convection-dominated transport equations

Dmitri Kuzmin

Wed 1425G: Mass conservative coupling of fluid flow and species transport in electrochemical flow cells

Jürgen Fuhrmann, Hartmut Langmach and Alexander Linke

Wed 1450G: A local theta scheme for advection problems with strongly varying meshes and velocity profiles

P. van Slingerland, M. Borsboom and C. Vuik

Wed 1515G: Stabilization of Galerkin finite element methods for transient advection-diffusion problems

Javier de Frutos, Bosco García-Archilla and Julia Novo

32 Wed 1610A: LC061: Theoretical and computational aspects of Discontinuous Galerkin methods

Organisers: Yekaterina Epshteyn, Beatrice Riviere, Johnny Guzman

Wed 1610A: Bubble stabilization of the Baumann-Oden DG formulation

Paola F. Antonietti, Franco Brezzi and L. Donatella Marini

Wed 1635A: A posteriori estimates for the bubble stabilized discontinuous Galerkin method

Benjamin Stamm

Wed 1700A: A discontinuous Galerkin method for the Stokes equations related to non-conforming finite element methods

Roland Becker, Daniela Capatina and Julie Joie

33 Wed 1610B: LC062: Goal-oriented error estimation and adaptivity

Organisers: Serge Prudhomme, Sergey Korotov, Paul Bauman

Wed 1610B: Goal-oriented error estimation and adaptivity of fluid-structure interaction using exact linearized adjoints

Kristoffer G. van der Zee, E. Harald van Brummelen and René de Borst

Wed 1635B: Adaptive finite element solution of fluid-structure interaction

T. Dunne, Rolf Rannacher and T. Richter

Wed 1700B: A posteriori error estimates for state-constrained optimal control on non-smooth domains

Winnifried Wollner

34 Wed 1610C: LC063: Parallel session talks

Chair: Igor Bock

Wed 1610C: Analytic and Finite Element Solutions for a Cantilever Beam with PZT Patches using Velocity Feedback Control

C. Spier and J. C. Bruch, Jr.

Wed 1635C: Modelling and numerical computation of journal bearing lubrication

Martin Lanzendörfer and Jan Stebel

Wed 1700C: Eigenderivative analysis of actively controlled structures with asymmetric non-positive-definite stiffness and non-proportional damping matrices

R. Mirzaeifar and H. Bahai

35 Wed 1610D: LC064: Finite Element Approximations in Optimal Control

Organisers: Thomas Apel, Arnd Rösch

Wed 1610D: Local mesh grading for optimal control problems in nonconvex domains

Th. Apel, Arnd Rösch, Dieter Sirch and G. Winkler

Wed 1635D: Optimal control of the Stokes problem under reduced regularity

Serge Nicaise and Dieter Sirch

Wed 1700D: Finite Element Error Analysis for State-Constrained Optimal Control of the Stokes Equations

Juan Carlos de los Reyes, Christian Meyer and Boris Vexler

36 Wed 1610E: LC065: Boundary Elements: theory and applications

Organisers: Norbert Heuer, Antoine Sellier

Wed 1610E: Symmetric and Non-Symmetric FEM-BEM Coupling for the Exterior Stokes problem

A. J. Radcliffe and E. P. Stephan

Wed 1635E: The Gauss Problem

G. Of, W. L. Wendland and N. Zorii

Wed 1700E: The mortar boundary element method

Martin Healey and Norbert Heuer

37 Wed 1610F: LC066: Domain decomposition methods and hierarchical bases of finite elements

Organisers: Ivana Pultarová, Ivo Marek, Pavel Burda, Marta Čertíková, Jakub Šístek

Wed 1610F: Parallel implementation of the BDDC method for linear elasticity

Jakub Šístek, Pavel Burda, Marta Čertíková, Jan Mandel and Jaroslav Novotný

Wed 1635F: Adaptive-Multilevel BDDC

Bedřich Sousedík and Jan Mandel

Wed 1700F: Applying hierarchy to coarse problems in BDDC methods

Ivana Pultarová

38 Wed 1610G: LC067: Finite element methods for convection dominated problems

Organisers: Volker John, Dmitri Kuzmin, Gert Lube

Wed 1610G: Goal-oriented error estimates and mesh adaptation for flux-limited Galerkin schemes

Dmitri Kuzmin and Matthias Möller

Wed 1635G: A Robust Semi-Implicit Finite Element Scheme for Nonlinear Hyperbolic Systems

Marcel Gurris, Dmitri Kuzmin and Stefan Turek

Wed 1700G: Regularity and Approximation of Elliptic-Hyperbolic Coupled Problems

Carola Kruse and Matthias Maischak

39 Wed 1730: H001: BABUŠKA LECTURE

Chair: Mary Wheeler

Wed 1730: *hp*-Adaptive Finite Elements for Convection Dominated Diffusion Problems
Leszek Demkowicz and J. Gopalakrishnan

40 Thu 0835A: LC061: A posteriori error estimates for discontinuous Galerkin methods

Organisers: Satyendra Tomar, Alexandre Ern

Thu 0835A: Gradient recovery by averaging for DG methods
Sarah Cochez-Dhondt, Emmanuel Creusé and Serge Nicaise

Thu 0900A: Fully computable error bounds for discontinuous Galerkin finite element approximations on meshes containing hanging nodes

Mark Ainsworth and Richard Rankin

Thu 0925A: Guaranteed and robust discontinuous Galerkin a posteriori error estimates for convection–diffusion–reaction problems

Alexandre Ern, Annette F. Stephansen and Martin Vohralík

Thu 0950A: Optimal cost for functional-type a posteriori error estimates for discontinuous Galerkin approximations

J.K. Kraus and S.K. Tomar

Thu 1015A: A posteriori error control for spatially discontinuous Galerkin schemes in evolution equations

Emmanuil Georgoulis and Omar Lakkis

41 Thu 0835B: LC062: Goal-oriented error estimation and adaptivity

Organisers: Serge Prudhomme, Sergey Korotov, Paul Bauman

Thu 0835B: Multiscale Modeling using Numerical Homogenization Adaptive Meshes and Moore-Penrose Pseudoinverse

Chetan Jhurani, Leszek Demkowicz, J. Tinsley Oden, Serge Prudhomme and Paul T. Bauman

Thu 0900B: Analytical and computational a posteriori error estimates for adaptive finite element methods

Karel Segeth

Thu 0925B: Fully computable error estimators for nonlinear problems

L. El Alaoui, Alexandre Ern and Martin Vohralík

Thu 0950B: On the upper bound property of the smoothed finite element method

Z.C. Xuan

Thu 1015B: Dual-based a posteriori error estimation for quasi-periodic problems

M. Braack, Erik Burman and N. Taschenberger

42 Thu 0835C: LC063: Finite elements and geometry

Organisers: Alexander Düster, Ernst Rank, Yuri Bazilevs

Thu 0835C: G^1 -Interpolation and Geometry Reconstruction for Higher Order Elements
Leszek Demkowicz, Paolo Gatto, Weifeng Qiu and A. Joplin

Thu 0900C: hp-Mesh Refinement on Curved Tetrahedral Meshes

Joachim Schöberl

Thu 0925C: Sensitivity of cylindrical isotropic shells

Marie Beaudouin, Monique Dauge and Erwan Faou

Thu 0950C: A general fictitious domain approach with non-boundary fitted meshes and multilevel nested structured grids: theory and applications

Isabelle Ramière

Thu 1015C: A comparison of fictitious domain methods appropriate for high-order finite element methods

Peter E.J. Vos, Raoul van Loon and Spencer J. Sherwin

43 Thu 0835D: LC064: Boundary Elements: theory and applications

Organisers: Norbert Heuer, Antoine Sellier

Thu 0835D: Convergence of adaptive BEM

Markus Aurada, Samuel Ferraz-Leite and Dirk Praetorius

Thu 0900D: On the mathematics for a hybrid BEM based on traditional and alternative BIE via the Fourier transform

Fabian Dudddeck

Thu 0925D: Regularized boundary-integral equations for creeping-flow problems involving arbitrary clusters of spherical droplets

A. Sellier

Thu 0950D: On the convergence analysis of high-order BEM for electro-magnetic scattering in three dimensions

Alex Bespalov and Norbert Heuer

Thu 1015D: Mathematical analysis of a high order Nystrom method for BIEs in three dimensional scattering problems

Oscar Bruno, Víctor Domínguez and Francisco-Javier Sayas

44 Thu 0835E: LC065: Higher-order and hp finite element methods

Organisers: Leszek Demkowicz, Joachim Schöberl

Thu 0835E: Quasipotimal multilevel based solvers for hp-FEM discretizations in 3D

S. Beuchler

Thu 0900E: Spectral-Like Element Methods on Hybrid Meshes for the Wave Equations

M. Bergot, G. Cohen and M. Duruflé

Thu 0925E: A Spectral Spurious-Free H1-L2 Approximation of Maxwell Equations

G. Cohen and A. Sinding

Thu 0950E: Transfinite Interpolation and Construction of H1 Shape Functions for Hexas, Tets, Prisms and Pyramids

Paolo Gatto and Leszek Demkowicz

Thu 1015E: Opportunities and Challenges for Higher Order Methods in Commercial Electromagnetic Applications

T. Euler

45 Thu 0835F: LC066: FEM for highly indefinite and eigenvalue problems

Organisers: Marcus Melenk, Stefan Sauter

Thu 0835F: New multigrid approach for finding many eigenfunctions of discrete partial differential operators

Irene Livshits

Thu 0900F: A convergent adaptive finite element method for photonic crystal fiber applications

Stefano Giani and Ivan G. Graham

Thu 0925F: A robust error estimator for elliptic eigenvalue problems

Randolph Bank, Luka Grubišić and Jeffrey S. Oval

Thu 0950F: Convergence and complexity of an adaptive algorithm for eigenvalue computation

Thorsten Rohwedder

46 Thu 0835G: LC067: Finite element methods for convection dominated problems

Organisers: Volker John, Dmitri Kuzmin, Gert Lube

Thu 0835G: Local projection methods for flow problems

Gunar Matthies, Piotr Skrzypacz and Lutz Tobiska

Thu 0900G: Enforcement of constraints in the variational multiscale method for convection-dominated problems

John A. Evans, Thomas J.R. Hughes and Giancarlo Sangalli

Thu 0925G: A Variational Multiscale Method For Turbulent Flow Simulation With Adaptive Large Scale Space

Volker John and Adela Kindl

Thu 0950G: Finite element simulation of natural convection flows with minimal stabilization

G. Lube

Thu 1015G: Numerical studies on the thermal hydraulics of the spallation target module of an accelerator driven sub-critical system

K. Arul Prakash, B. V. R. Kumar and G. Biswas

47 Thu 1110: H001: Invited talks

Chair: Ken Morgan

Thu 1110: Recent Advances Toward Computationally Desirable Zigzag Bending Theories for Laminated-Composite and Sandwich Structures

Alexander Tessler, Marco Di Sciuva and Marco Gherlone

Thu 1155: Numerical Zoom for localized Multi-Scale Problems

Olivier Pironneau

48 Thu 1400A: LC061: A posteriori error estimates for discontinuous Galerkin methods

Organisers: Satyendra Tomar, Alexandre Ern

Thu 1400A: Convergent adaptive iterations for DG methods

Guido Kanschat

Thu 1425A: Energy norm a-posteriori error estimation for hp -adaptive discontinuous Galerkin methods for convection-diffusion equations

Liang Zhu and Dominik Schötzau

Thu 1450A: A unifying framework for a posteriori error control for discontinuous Galerkin FEM

Carsten Carstensen and Max Jensen

49 Thu 1400B: LC062: Goal-oriented error estimation and adaptivity/ Parallel session talks

Organisers: Serge Prudhomme, Sergey Korotov, Paul Bauman

Thu 1400B: Guaranteed and robust a posteriori error estimates for problems with inhomogeneous coefficients and dominant reaction

Martin Vohralík

Thu 1425B: On a time-sequential adaptive strategy in FE-analysis for the visco-plasticity problem

Fredrik Larsson and Kenneth Runesson

Thu 1450B: Goal Oriented Space-Time Adaptivity for Simulation and Optimization of Parabolic Systems

Dominik Meidner and Boris Vexler

Thu 1515B: A handy anisotropic recovery-based error estimator

Stefano Micheletti and Simona Perotto

50 Thu 1400C: LC063: Numerical analysis of unilateral contact between structures

Organisers: Adel Blouza, Faker Ben Belgacem

Thu 1400C: Finite element discretizations of the contact between two membranes

Christine Bernardi

Thu 1425C: Adaptive finite elements for variational inequalities with discontinuous coefficients and applications

Zakaria Belhachmi

Thu 1450C: The Singular Dynamic Method: a well-posed semi-discretization of contact problems in elastodynamics

Yves Renard

Thu 1515C: A residual error estimator for FE discretization of Coulomb friction

P. Hild

51 Thu 1400D: LC064: Higher-Order and Zigzag Bending Theories with Applications in Computational Mechanics

Organisers: Alex Tessler, Marco Di Sciuva, Marco Gherlone

Thu 1400D: A new theoretical framework for the formulation of general, nonlinear, multi-scale plate theories

Todd O. Williams

Thu 1425D: A C^0 -Continuous Two-Node Beam Element Based on Refined Zigzag Theory and Interdependent Interpolation

Marco Gherlone, Alexander Tessler and Marco Di Sciuva

Thu 1450D: Layerwise Model with Adaptive Refinement across the Thickness and Fixed Functional D.O.F.

U. Icardi and L. Ferrero

Thu 1515D: An Efficient, C^0 -Continuous Triangular Element for Laminated Composite and Sandwich Plates with Improved Zigzag Kinematics

D. Versino, M. Mattone, Marco Gherlone, Alexander Tessler and Marco Di Sciuva

52 Thu 1400E: LC065: Higher-order and hp finite element methods

Organisers: Leszek Demkowicz, Joachim Schöberl

Thu 1400E: Goal-Oriented hp-Adaptive Strategies for the Analysis of Scattering and Radiation of Electromagnetic Waves

Ignacio Gomez-Revuelto, Luis E. Garcia-Castillo and Daniel Garcia-Doñoro

Thu 1425E: Dispersive and Dissipative Behaviour of Optimally Blended Finite Element/Spectral Element Schemes for Wave Propagation

Mark Ainsworth and Hafiz Abdul Wajid

Thu 1450E: A Mixed Hybrid Finite Element Method for the Helmholtz Equation

A. Hannukainen, M. Huber and Joachim Schöberl

Thu 1515E: Efficient preconditioning for high order edge elements applied to wave propagation and eddy current problems

P.D. Ledger and S. Zaglmayr

53 Thu 1400F: LC066: Boundary Elements: theory and applications

Organisers: Norbert Heuer, Antoine Sellier

Thu 1400F: Exponential Convergence of *hp* Quadratures for Integral Operators with Gevrey Kernels

Alexey Chernov, Tobias von Petersdorff and Christoph Schwab

Thu 1425F: hp-BEM on curved surfaces

Matthias Maischak

Thu 1450F: A BEM technique for the detection of skin tumours by thermal analysis

L.C. Wrobel and P.W. Partridge

Thu 1515F: Rapid Solver for 3D Acoustic Problems Using Boundary Element Method

A. Brancati and M. H. Aliabadi

54 Thu 1400G: LC067: Finite elements and geometry

Organisers: Alexander Düster, Ernst Rank, Yuri Bazilevs

Thu 1400G: The Finite Cell Method

A. Düster, Monique Dauge, Z. Yang and E. Rank

Thu 1425G: Immersed B-Spline Finite Elements for Complex Domains

Rodolfo A. Kuche Sanches, Quan Long and Fehmi Cirak

Thu 1450G: Adaptive isogeometric analysis with T-splines

Bernd Simeon, Michael Dörfler and Bert Jüttler

Thu 1515G: Approximation properties of k -refined NURBS in isogeometric analysis

John A. Evans, Yuri Bazilevs, Ivo Babuška and Thomas J.R. Hughes

55 Thu 1400H: H001: FEM with non-polynomial basis functions

Organisers: Peter Monk, Ilaria Perugia

Thu 1400H: The ultra-weak variational formulation using Bessel basis functions

Teemu Luostari, Tomi Huttunen and Peter Monk

Thu 1425H: Plane Wave Discontinuous Galerkin Methods: Convergence Theory
Ralf Hiptmair, C. Gittelson, Andrea Moiola and Ilaria Perugia

Thu 1450H: Approximation by plane waves

Andrea Moiola and Ralf Hiptmair

Thu 1515H: Non-reflecting and modal boundary conditions for the wave-based discontinuous Galerkin method

G. Gabard and G. Kennedy

56 Thu 1610A: LC061: Parallel session talks

Chair: John Bruch

Thu 1610A: Electromagnetic wave propagation at classical material/meta-material interfaces

A.-S. Bonnet-Bendhia and P. Ciarlet, Jr

Thu 1635A: Numerical analysis of a finite element method for an electromagnetic forming problem in axisymmetric domains

Alfredo Bermúdez, Carlos Reales, Rodolfo Rodríguez and Pilar Salgado

Thu 1700A: On the convergence of a finite element method for a Maxwell eigenvalue problem with variational crimes

Wouter Hamelinck

Thu 1725A: Boundary element method for exterior Helmholtz equation problems

Pavel Moses

Thu 1750A: Nonlinearly Preconditioned Globalization Strategies – Convergence Results and Numerical Examples

Christian Groß and Rolf Krause

57 Thu 1610B: LC062: Stochastic and multiscale numerical modeling of PDEs/ Parallel session talks

Organisers: Ivan Yotov, Mary Wheeler

Thu 1610B: Homogenization-based Multiscale Finite Elements for Heterogeneous Porous Media

T. Arbogast

Thu 1635B: Uncertainty estimation for flow in non-stationary random porous media using stochastic collocation and a mortar multiscale flux basis

Benjamina Ganis and Ivan Yotov

Thu 1700B: Multiscale Basis Mortar Mixed Finite Element for Multiphase Flow

Mary F. Wheeler and Tim Widley

Thu 1725B: Coupling mixed methods using mortar finite elements for elliptic and parabolic problems

Eun-Jae Park

Thu 1750B: Stochastic equations with fractional Brownian motion

Jan Pospíšil

58 Thu 1610C: LC063: New trends in micromagnetics

Organiser: Thomas Schrefl

Thu 1610C: Numerical methods for Landau-Lifshitz-Gilbert equations

Sören Bartels

Thu 1635C: Innovative finite elements scheme for Landau-Lifshitz equations

Pascal Jaisson, Francois Alouges and Jean-Christophe Toussaint

Thu 1700C: Mixed conforming elements for the large-body limit in micromagnetics

Markus Aurada, Jens Markus Melenk and Dirk Praetorius

Thu 1725C: Finite element discretization of a reduced model in thin-film micromagnetics

Samuel Ferraz-Leite, Jens Markus Melenk and Dirk Praetorius

59 Thu 1610D: LC064: Parallel session talks

Chair: Hamid Bahai

Thu 1610D: Convergence of a finite element - finite volume scheme for the compressible barotropic Navier-Stokes equations

Robert Eymard, Thierry Gallouët, Raphaèle Herbin and Jean-Claude Latché

Thu 1635D: Convergence of a family of Galerkin discretizations for the Stokes-Darcy coupled problem

Gabriel N. Gatica, Ricardo Oyarzúa and Francisco-Javier Sayas

Thu 1700D: Application of discontinuous Galerkin method for viscous compressible flow

Martin Holík

Thu 1725D: On Finite Element Approximation of Navier-Stokes Equations by WEB-Splines

B. V. R. Kumar, V. V. S. Kumar and P. C. Das

Thu 1750D: Involutive formulation and simulation for electroneutral microfluids

Bijan Mohammadi and Jukka Tuomela

60 Thu 1610E: LC065: FEM for highly indefinite and eigenvalue problems/ Higher-order and hp finite element methods

Organisers: Marcus Melenk, Stefan Sauter/ Leszek Demkowicz, Joachim Schöberl

Thu 1610E: Hybrid Finite Elements for the Helmholtz Equation

Joachim Schöberl

Thu 1635E: Convergence Analysis for Finite Element Discretizations of the Helmholtz Equation on Bounded and Unbounded Domains

Stefan A. Sauter and Jens Markus Melenk

Thu 1700E: Efficient High Order DG Method for Time-domain Maxwell Equations

C. Lehrenfeld and Joachim Schöberl

Thu 1725E: Hardy space infinite elements for scattering and resonance problems

L. Nannen

Thu 1750E: Mixed *hp* finite element method for linear elasticity with weakly imposed symmetry

Weifeng Qiu and Leszek Demkowicz

61 Thu 1610F: LC066: Boundary Elements: theory and applications/ Domain Decomposition and BEM

Organisers: Norbert Heuer, Antoine Sellier/ Ulrich Langer, Olaf Steinbach

Thu 1610F: Applications of Fast Multipole Method in Aeronautics

Guillaume Sylvand and Isabelle Terrasse

Thu 1635F: Treatment of singularities for a volume integral equation

Martin Costabel, Eric Darrigrand, El Hadji Kone and Daniel Martin

Thu 1700F: FETI/BETI methods in unbounded domains

Clemens Pechstein

Thu 1725F: Coupling of boundary and finite element methods for time-domain problems

Thomas Rüberg

Thu 1750F: Boundary element tearing and interconnecting methods for non-elliptic partial differential equations

Olaf Steinbach

62 Thu 1610G: LC067: Finite elements and geometry/ Parallel session talks

Organisers: Alexander Düster, Ernst Rank, Yuri Bazilevs

Thu 1610G: NURBS-based isogeometric analysis versus p-finite elements in structural dynamics and wave propagation

Thomas J.R. Hughes, A. Reali and Giancarlo Sangalli

Thu 1635G: Efficient Quadrature for NURBS-based Isogeometric Analysis

Thomas J.R. Hughes, A. Reali and Giancarlo Sangalli

Thu 1700G: Free form design of thin shells: Lateral design noise filters and in-plane-Plateau stabilization

Kai-Uwe Bletzinger, Matthias Firl, Johannes Linhard and Roland Wüchner

Thu 1725G: Adaptive Finite Elements for Shape Optimization Problems

Pedro Morin, Ricardo H. Nochetto, M. Sebastian Pauletti and Marco Verani

Thu 1750G: Averaging of directional derivatives in vertices of unstructured triangulations

Josef Dalík

63 Fri 0835A: LC061: Recent Advances in Discontinuous Galerkin Methods

Organisers: Miloslav Feistauer, Vit Dolejší, Jaap van der Vegt

Fri 0835A: *hp*-Anisotropic Adaptive Discontinuous Galerkin Finite Element Methods for Compressible Flows

Paul Houston

Fri 0900A: *hp*-Optimality in DG Methods for Elliptic Problems

Thomas P. Wihler

Fri 0925A: A high-order DG method for the time harmonic Maxwell equations

Ferenc Izsák

Fri 0950A: On the DG method for the solution of IBVP's in time dependent domains

Miloslav Feistauer

Fri 1015A: Analysis of multigrid techniques for higher order accurate space-time DG discretizations

Jaap van der Vegt and Sander Rhebergen

64 Fri 0835B: LC062: Numerical problems in density functional theory

Organiser: Reinhold Schneider

Fri 0835B: Nonlinear eigenvalues problems and applications to DFT

Eric Cancès

Fri 0900B: Reduced Density Matrix Functional for Many-Electron Systems

S. Sharma, J. K. Dewhurst, N. N. Lathiotakis and E. K. U. Gross

Fri 0925B: Iterative Solution of the Kohn-Sham System for Semiconductor Devices

Kurt Hoke

Fri 0950B: Direct minimization and a posteriori error estimators in Density Functional Theory

R. Schneider

Fri 1015B: A posteriori error estimators for Hartree Fock and DFT

Stephan Schwinger

65 Fri 0900C: LC063: New trends in micromagnetics

Organiser: Thomas Schrefl

Fri 0900C: Large-scale micromagnetic simulations with hierarchical matrices
Riccardo Hertel, Attila Kakay and Steffen Börm

Fri 0925C: Hierarchical tensors for fast field evaluation in micromagnetics
A. Goncharov, G. Hrkac and T. Schrefl

Fri 0950C: Mathematical modelling of heat assisted micromagnetic processes
Marián Slodička

Fri 1015C: Multiscale strategies for the micromagnetic numerical analysis of large bodies
Oriano Bottauscio, Mario Chiampi and Alessandra Manzin

66 Fri 0835D: LC064: Error control and adaption in evolution problems

Organisers: Omar Lakkis, Emmanuil Georgoulis

Fri 0835D: A local-in-space-timestep approach to a finite element discretization of the heat equation with *a posteriori* estimates
Stefano Berrone

Fri 0900D: Error estimation in time dependent convection-diffusion equations
Javier de Frutos, Bosco García-Archilla and Julia Novo

Fri 0925D: Localized pointwise *a posteriori* error estimates for parabolic problems
Alan Demlow and Ch. Makridakis

Fri 0950D: *A posteriori* error estimates for fully discrete approximations for parabolic problems
F. Karakatsani, E. Bänsch and Ch. Makridakis

Fri 1015D: *A posteriori* error estimates for a nonconforming finite element discretization of the time-dependent Stokes problem
Serge Nicaise and Nadir Soualem

67 Fri 0835E: LC065: Higher-order and hp finite element methods

Organisers: Leszek Demkowicz, Joachim Schöberl

Fri 0835E: Numerical approximation of Maxwell equations using B-splines
Annalisa Buffa and Rafael Vázquez

Fri 0900E: Construction of hp-finite elements for pyramids
S. Zaglmayr

Fri 0925E: Adaptive Electromagnetic Scattering Analysis of Jet Engine Inlets
A. Zdunek and W. Rachowicz

Fri 0950E: *hp*-adaptive finite element modeling of the Pekeris waveguide
Jeffrey Zitelli

Fri 1015E: Discrete compactness for the p-version of edge elements in view of a spectrally correct approximation of Maxwell equations
Daniele Boffi, Martin Costabel, Monique Dauge and Leszek Demkowicz

68 Fri 0835F: LC066: Theory and Numerics of Boundary-Domain Integral Equations/ Finite element approximation of singularities

Organisers: Sergey Mikhailov/ Alex Bespalov

Fri 0835F: Localized boundary-domain integral equations formulation for crack type problems
O. Chkadua, S.E. Mikhailov and D. Natroshvili

Fri 0900F: Finite element solution of corner singularities in fluid flow problems
Pavel Burda, Jaroslav Novotný and Jakub Šístek

Fri 0925F: Least-Squares FEM for Problems with Boundary Singularities
Chad Westphal

Fri 0950F: Approximations of singularities by boundary element methods
Alex Bespalov and Norbert Heuer

Fri 1015F: An FEM for the Neumann and transmission problems
Hengguang Li, Anna Mazzucato and Victor Nistor

69 Fri 0835G: LC067: FEM with non-polynomial basis functions

Organisers: Peter Monk, Ilaria Perugia

Fri 0835G: The discontinuous enrichment method for the Helmholtz equation

Charbel Farhat, Radek Tezaur and Jari Toivanen

Fri 0900G: Analysis of a least-squares finite element method for scattering on polygons
Timo Betcke

Fri 0925G: On the use of a Trefftz-based wave based prediction technique for solving Helmholtz problems involving multiple scatterers

Bert Van Genechten, Bart Bergen, Dirk Vandepitte and Wim Desmet

Fri 0950G: NURBS based discretization methods for PDEs

Annalisa Buffa, Giancarlo Sangalli and Rafael Vázquez

Fri 1015G: On preconditioners for the numerical solution by PUFEM of the time-harmonic elastic wave equations

A. El Kacimi and O. Laghrouche

70 Fri 1110: H001: Invited talks

Chair: Norbert Heuer

Fri 1110: On the Implicit, Adaptive, Multilevel Solution of Nonlinear Parabolic Systems for Phase Change Problems in Two and Three Dimensions

James Green, Peter Jimack, Andrew Mullis and Jan Rosam

Fri 1155: On Traces, Extensions, Co-normal Derivatives and Solution Regularity of Elliptic Systems with Smooth and Non-smooth Coefficients

S.E. Mikhailov

71 Fri 1400A: LC061: Recent Advances in Discontinuous Galerkin Methods

Organisers: Miloslav Feistauer, Vit Dolejší, Jaap van der Vegt

Fri 1400A: On the optimality of IPG methods for odd degrees of polynomial approximation

V. Dolejší and Oto Havle

Fri 1425A: Error Analysis of a DG approximation of problems in nonpolygonal domains
Veronika Sobotíková

Fri 1450A: Discrete functional analysis tools for Discontinuous Galerkin methods
Daniele A. Di Pietro and Alexandre Ern

Fri 1515A: Optimal error estimates for nonlinear diffusion in the DG method
Václav Kučera

72 Fri 1400D: LC064: Error control and adaption in evolution problems

Organisers: Omar Lakkis, Emmanuil Georgoulis

Fri 1400D: Recovery Based Adaptivity for Parabolic Problems

Tristan Pryer

Fri 1425D: Space-Time Adaptive Wavelet Methods for Parabolic Evolution Problems
Rob Stevenson and **Christoph Schwab**

Fri 1450D: Primal-dual active set methods for Allen-Cahn variational inequalities
Luise Blank, Harald Garcke, Lavinia Sarbu and **Vanessa Styles**

Fri 1515D: Robust approximation of phase field models past topological changes
Sören Bartels, Rüdiger Müller and **Christoph Ortner**

Fri 1540D: A posteriori error estimates for the BDF2 method for parabolic equations
Georgios Akrivis and **Panagiotis Chatzipantelidis**
